Typography

Typography in this design system is created to make content easy to read and quick to scan. Clear font roles, consistent sizes, weights, and line heights help maintain a strong hierarchy across screens while keeping the interface comfortable for long usage. The goal is to ensure text feels balanced, readable, and consistent across all components.

Headings

TypeFace	Sample	Font Family	Font Weight	Font Size	Line Height
Heading 1	H1. Headline	Lebara Sans	Extra Bold	128	128
Heading 2	H2. Headline	Lebara Sans	Bold	96	96
Heading 3	H3. Headline	Lebara Sans	Semi Bold	72	72
Heading 4	H4. Headline	Lebara Sans	Medium	60	60
Heading 5	H5. Headline	Lebara Sans	Regular	48	48

Title

TypeFace	Sample	Font Family	Font Size	Font Weight	Line Height
Title	Title	Vanilla Sans	24	Medium	24
Sub-Title	Sub-Title	Vanilla Sans	18	Medium	18

Body / Paragraph

TypeFace	Sample	Font Family	Font Size	Font Weight	Line Height
Body	Body	Vanilla Sans	16	Regular	16
Paragraph	Paragraph	Vanilla Sans	14	Regular	14

Caption

TypeFace	Sample	Font Family	Font Size	Font Weight	Line Height
Caption	Caption	Vanilla Sans	14	Regular	14

Button

TypeFace	Sample	Font Family	Font Size	Font Weight	Line Height
Large Button Text	Button Text	Vanilla Sans	18	Regular	18
Small Button-Text	Button-Text	Vanilla Sans	12	Regular	12

Note: Typography values are defined using variables so changes can be made once and reflected everywhere, keeping the system consistent and scalable.

Color

The color system is designed to guide attention, support actions, and clearly communicate system states. A dark-first approach reduces eye strain, while structured color levels and semantic colors help users quickly understand meaning, hierarchy, and feedback across the interface.

Background

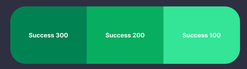

Accent

Achromatic

Success

Warning

Error

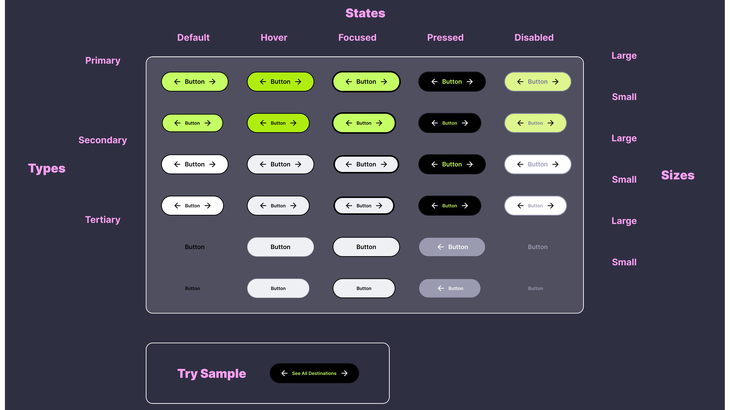

Note: All colors are created as variables to maintain consistency, simplify updates, and support future theming and scalability.

Button

Buttons in this design system are designed to make actions feel clear, confident, and effortless. Primary, secondary, and tertiary styles help users understand action priority, while consistent states such as default, hover, focused, pressed, and disabled provide clear interaction feedback. Buttons are available in small and large sizes, with carefully defined text styles and a fixed height of 48px to ensure visual consistency, comfortable touch targets, and predictable behaviour across the interface. Icons are used only when they add clarity, keeping actions simple and easy to understand.

Working Components

Input Field

Input fields in this design system are used to enter or display values in a clear and consistent way. Each field can include a label to explain what information is needed and a description to give extra guidance. When no value is entered, placeholder text is shown. The field also reflects its current state, such as default, focused, disabled, or error, helping users understand what action is required.
